Replace Animal Dissection with NAM Alternatives in High School Biology

We, the undersigned students, parents, teachers, and alumni, urge the administrators at

Hogwarts School of Witchcraft

to replace animal dissection with modern, ethical, and scientifically superior

New Approach Methodologies (NAM)

utilizing technologies as virtual labs and organ-on-a-chip models, in our biology curricula.

NAM alternatives are **more accurate, cost-effective, and aligned with global best practices**, preparing students for careers in biotech, medicine, and regulatory science. By adopting NAM, we can **modernize education, uphold ethical standards, and ensure our students are competitive in the future job market**.

We respectfully request a review of our curriculum to prioritize NAM-based tools.
